

Assessment Test

Build a simple responsive web application in Vue.js to display a Merchant and their Companies. The merchant information should contain full name, SSN, Credit score, date of birth, email, phone number, full address with ability to edit each field. A merchant can own many companies; give the user the ability to add companies to this merchant with ability to create/modify/delete companies which should include the company name, DBA (doing business as), and full address (street, city, state, zip).

We will assess your work based on four categories:

- Responsiveness
- User Experience
- Creativity
- Functionality

Requirements

- The solution must be developed in **Vue.JS**
- The web application should be responsive and functional.
- You can pick any UI development framework that you are comfortable with (Bootstrap, Vuetify, etc).
- Use your own design to present the merchant information and the company information

Once you're finished with the assessment, compress the files and email your solution to hanine@advantagecapitalfunding.com
